ALTHOUGH the 8vo. Abridgment of Johnson's Dictionary possesses merit peculiar to itself, yet with all its advantages and excellencies, it does not answer the purpose of an abridgment on a smaller scale; nor can it ever be rendered of such general utility, or of such frequent recurrence in common affairs. Hence the various abridgments of that work, which have been given to the public under different forms, have all of them met with a rapid sale; this furnishes the best criterion of their importance and usefulness, and is the most unequivocal testimony of public approbation. To unite the various merits of former publishers, and to avoid the defects into which they have fallen to select from the various explanations of Johnson such as are most frequent and most likely to occur in common use, has been the aim of the publishers of the present edition. How far they have succeeded in the attainment of these objects, they do not presume to decide, but leave to the determination of an impartial public; assuring them at the same time, that uncommon pains and industry have been bestowed, in comparing every particular word with its original explanation in Johnson's 8vo. Dictionary, and in the smaller abridgment; and in selecting from the whole such alterations and improvements as were deemed necessary or useful.

An Epitome of the Heathen Mythology follows the Dictionary; together with an accurate List of all the Cities, Boroughs, and Market Towns, in England and Wales, with their respective distances from the Metropolis; and a copious Chronology annexed, exhibits the general Outlines of ancient and modern History.

JOHNSON'S DICTIONARY.

MYTHOLOGY

Mythology is a term compounded of two Greek words, *mythos* and *logos*, and in its original import, it signifies any kind of fabulous doctrine: In its more appropriated sense, it means those fabulous details concerning the objects of worship which were invented and propagated by men, who lived in the early ages of the world; and by them transmitted to succeeding generations, either by written records or by oral tradition.

The *Pantheon* is the Temple of the Gods, which the folly of men hath feigned either through the grossest ignorance or contempt of the true and only God. The causes of signing many deities were chiefly four. The first was the foolish perverseness of the mind, which denied the inexhausted fountain of all Good the honours which it distributed to muddy streams. If any excelled in stature of body, greatness of mind, or brilliancy of wit, he drew the admiration of the ignorant vulgar. This gradually being converted into great veneration, even into worship itself, at length ranked the man among the number of the Gods; the more prudent being either carried away by the torrent of opinion, or not able, at least not daring to resist it.—The second was the sordid flattery of subjects towards their Princes. That they might gratify the vanity, flatter the pride, and soothe the self-conceit of their Kings, they raised Altars, and having set their images upon them, offered incense to them, even when alive, as to their Gods themselves.—A third was an inordinate desire of immortality, which many studied to attain by images left behind them; thinking that they would rescue their names from the power of death, and the destroying hand of time, if, after their funerals, they could live in brass, or as it were breathe in marble.—A fourth was a preposterous desire of perpetuating the memory of famous men whom they made or rather feigned Gods, for their services and benefits conferred on mankind.

The Pagan priests, especially in Egypt, were probably the first who reduced Mythology to a kind of system. Egypt was the land of graven images; allegory and Mythology

were the veil which concealed religion from the eyes of the vulgar; fable was the ground work of that impenetrable covering.

The worship of brute animals, and of certain vegetables, universal among the Egyptians, was another exuberant source of Mythological adventures. After these objects, animate or inanimate, were consecrated as the visible symbols of the Deities, it soon became fashionable to make use of their figures to represent those Deities to which they were consecrated. Hence Jupiter Amon was represented under the figure of a Ram, Apis under that of a Cow, Osiris of a Bull, Pan of a Goat, Thol or Mercury of an Ibis, Bubastis or Diana of a Cat, &c. It was likewise a common practice among the deluded people to dignify these objects, by giving them the names of those deities which they represented. From these two sources, are derived the fabulous transformation of the Gods, so generally celebrated in the Egyptian Mythology, and from it imported into Greece and Italy. In consequence of this practice, their Mythological system was rendered at once enormous and unintelligible.

The adventures of Jupiter, Juno, Mercury, Apollo, Diana, Mars, Minerva or Pallas, Venus, Bacchus, Ceres, Proserpine, Pluto, Neptune, and the other descendants and coadjutors of the ambitious family of the Titans, furnish by far the greatest part of the Mythology of Greece. They left Phœnicia, about the age of Moses; they settled in Crete, a large Island; from this region they made their way into Greece; which, according to the most authentic accounts, was at that time inhabited by a race of savages. The arts and inventions which they communicated to the natives; the mysteries of religion which they inculcated; the laws, customs, polity, and good order, which they established; in short the blessings of humanity and civilization which they every where disseminated, in process of time inspired the unpolished inhabitants with a kind of divine admiration. Those ambitious mortals improved this admiration into divine homage and adoration.

The greatest part of that worship, which had been formerly addressed to the luminaries of Heaven, was now transferred to those illustrious personages. They claimed and obtained divine honours from the deluded rabble of enthusiastic Greeks. Hence sprung an inexhaustible fund of the most inconsistent and irreconcilable fictions. The foibles and frailties of the deified mortals were transmitted to posterity, incorporated as it were with the pompous attributes of supreme divinity. Hence the heterogeneous mixture of the mighty and the mean which chequers the characters of the Heroes of the *Iliad* and *Odyssey*.

The labours of Hercules originated in Egypt, and evidently relate to the annual progress of the Sun in the Zodiac, though the vain-glorious Greeks accommodated them to a hero of their own, the reputed son of Jupiter and Alcmena. The expedition of Osiris they borrowed from the Egyptians, and transformed to their Bacchus. The transformations and wanderings of Io are evidently transcribed from the

Egyptian romance of the travels of Isis in quest of the body of Osiris, or of the Phœnician Astarte drawn from Sanchoniathon. The fable of the conflagration occasioned by Phaeton is clearly of oriental extract, and alludes to an excessive drought, which in the early period of time scorched Ethiopia and the adjacent countries. The rape of Proserpine, and the wanderings of Ceres; the Eleusinian Mysteries; the Orgies; or sacred rites of Bacchus; the rites at the worship of the Cabiri, were imported from Egypt and Phœnicia, but strangely garbled and disfigured by the Hierophants of Greece. In short, the groundwork of the Grecian Mythology is to be traced in the East. The Roman Mythology was borrowed from the Greeks. They had indeed gleaned a few fables from the Pelasgians, the Etruscans, which, however, are of so little consequence, that they are not worth transcribing. Besides, we hope it will be remembered that the narrowness of the limits prescribed us would scarce admit of a more copious detail.

ENGLAND

IS the southern division of the island of Great Britain. Including Wales, it is of a triangular form, and lies between the 50th and 54th degrees of North latitude, extending about 400 miles in length from south to north, and in some places it is 300 miles in breadth. It is bounded by Scotland on the North; by the English Channel on the South, dividing it from France; by the German Sea, on the East; and on the West by St. George's, or the Irish Channel. At what time the island of Great Britain was peopled, is uncertain; nor do we know whether the Southern or Northern parts were first inhabited. We have no accounts that go the length of upon before the arrival of *Julius Cæsar*, and it is certain that he found the Southern part full of a people of a very warlike disposition.

The situation, by the sea washing it on three sides, renders England liable to great uncertainty of weather, so that the inhabitants on part of the sea coasts are often visited by agues and fevers. On the other hand, it presents the extremes of heat and cold, to which other places, lying in the same degree of latitude, are subject; and it is, on that account, friendly to the longevity of the inhabitants in general, especially those who live in a dry soil. To this situation likewise we are to ascribe that perpetual verdure for which England is remarkable, occasioned by refreshing showers, and the warm vapours of the sea. Its extent is 40150 square miles, and it contains a population recently estimated at 9,313,178, of which number 861,545 are resident in the metropolis. The manufactures and commerce of the country are copious, and absorb almost the whole attention of many classes of the people.

Though, in some parts, there are large barren moors, and wide uncultivated heaths; in the whole, few countries have a larger proportion of land capable of culture, and in no is none where agriculture is better cultivated to, or, indeed, where it is more necessary for the subsistence of the inhabitants.

The Government is a mixture of Monarchy, Aristocracy, and Democracy—the le-

gislative power residing in the King, the House of Lords, and the House of Commons, but the executive power is vested solely in the King, who appoints the great Officers of State, and many of even the inferior gradations of Magistracy. England is divided into 32 counties or shires; there are 40 in England properly so called, and 12 in the Principality of Wales.

Since the Norman conquest, England has been divided into six circuits, each circuit containing a certain number of counties. Two judges are appointed for each circuit, which they visit in the spring and autumn, for administering justice to the subjects, who are at a distance from the capital. These circuits are—the Home circuit,—the Norfolk circuit,—the Oxford circuit,—the Midland circuit,—the Western circuit, and the Northern circuit. Besides the 10 counties into which England is divided, there are counties corporate, consisting of certain districts, to which the liberties and jurisdictions peculiar to a county have been granted by charter from the throne. The established religion of England is Episcopacy. The church, under the description of the monarchical power over it, is governed by two Archbishops, and 12 Bishops, besides the Bishop of Eborac and Man, who, not being possessed of an English Barony, does not sit in the House of Peers. England contains about 60 Archdeacons. Subordinate to them are the rural Deacons, formerly styled *Archpresbyters*, who signify the Bishop's pleasure to the Clergy, the lower class of which consists of parish priests who are called *Rectors* or *Pastors*, deacons and curates. The Ecclesiastical government of England is, properly speaking, lodged in the Convocation; which is a national representation or synod, and answers pretty near to the *States* we have of a parliament. They are convoked at the same time with every parliament; and their business is to consider of the state of the Church, and to call these on account who have advanced new opinions, inconsistent with the doctrines of the Church of England.

[Here ends the illustrious list of ancient, or, as they are styled, Classic authors, for whom mankind are indebted to Greece and Rome, those two great theatres of human glory; but it will ever be regretted that a small part only of their writings have come to our hands. This was owing to the barbarous policy of the fierce illiterate Pagans, who, in the fifth century, subverted the Roman empire, and in which practices they were joined soon after by the Saracens, or followers of Mahomet. Constantinople alone had escaped the ravages of the Barbarians; and to the few literati who sheltered themselves within its walls, is chiefly owing the preservation of these valuable remains of antiquity. To learning, civility, and refinement, succeeded worse than Gothic ignorance—the superstition and haughtiness of the church of Rome; Europe therefore produces few names worthy of record during the space of a thousand years; a period which historians, with propriety, denominate the dark or Gothic ages.]

The invention of printing contributed to the revival of learning in the sixteenth century, from which memorable era a race of men have sprung up in a new soil, France, Germany and Britain; who, if they do not exceed, at least equal the greatest geniuses of antiquity. Of these our own countrymen have the reputation of the first rank, with whose names we shall finish our list.]
